CyberSafely
Parental Safety Solution

A Fundraiser That Also Protects Your Students

A new way to fund your school — without another sale, another carnival, or another ask that goes nowhere.

Every year, schools turn to sales, carnivals, and chocolate to fund PTO needs, music and athletics budgets, and pay-to-play fees — asking a lot from staff and families for surprisingly little. One recent example brought in about $2,200 for a full season of work. CyberSafely.ai offers something different: families get a real tool to help keep their kids safer online, and your school earns a share of every family that signs up.

CyberSafely.ai is an AI-powered parental safety platform built around a smart keyboard that detects real-time risks such as cyberbullying, sextortion, drug references, and self-harm language, across every app a child uses. When something matters, parents get an instant alert with the context to act, without retaining a record of their child's day.

AI-Powered Monitoring	Instant Parent Alerts	Always-On Coverage
A smart keyboard replaces the standard one and checks typed content in real time for risk signals. Passwords are never collected.	Notifications within seconds, with a severity rating and the context to respond. Parents choose their own detail level.	Works across every app and platform, surfacing risks early, before online danger becomes real-world harm.

Why CyberSafely Matters

How the Fundraiser Works

- CyberSafely.ai provides everything your team needs — marketing materials, enrollment support, and reporting.
- Your school promotes it through the channels families already trust — PTO, athletics, music, assemblies, and parent communications.
- Families subscribe for $150 a year, per student.
- Your school earns 20% of every subscription — automatically, and every year those families stay enrolled.

What Your School Could Earn

For a school with 2,500 students, at four participation levels:

Participation	Paying Students	To Your School
25%	625	$18,750
50%	**1,250**	**$37,500**
75%	1,875	$56,250
100%	2,500	$75,000

These are estimates, not promises — built from the program's math ($150 × 20%), not a guarantee of participation. The formula is simple: $30 goes to your school for every student who subscribes.

District-Wide Potential (5 Schools)

The same math, scaled across 5 schools of 2,500 students each:

Participation	Paying Students	To Your School
25%	3,125	$93,750
50%	**6,250**	**$187,500**
75%	9,375	$281,250
100%	12,500	$375,000

What CyberSafely.ai Provides / What Your School Does

CyberSafely.ai Provides	Your School Does
Marketing materials, campaign posters, and email templates	Promote enrollment through trusted channels (PTO, athletics, music, assemblies)
Enrollment support and onboarding	Identify a point person to lead the effort
Signup and payment reporting via QR code	Track and celebrate participation with your community

Parents Stay in Control

This isn't school-operated monitoring. Your school introduces and validates the program — families make the decision to subscribe, and parents are the ones who monitor their own children and act on what they see. CyberSafely.ai puts the tool directly in parents' hands, where it belongs.

A fundraiser your community can feel good about — supporting your school and protecting your students, at the same time.
